**NEC REMOTE ADMINISTRATION SOFTWARE IMPROVES
ORGANIZATIONAL ASSET MANAGEMENT OF NEC PROJECTORS AND
DISPLAYS**

***Airports, Restaurants, Retailers and Other Businesses Benefit from Easy to
Use NaViSet Administrator 2 Software***

CHICAGO – May 29, 2013 – [NEC Display Solutions of America](#), a leading [provider](#) of commercial LCD display and projector solutions, announced today a new remote management and monitoring software solution that helps organizations reduce technical support costs, improve display and projector control, and remotely administer installed NEC products.

NaViSet™ Administrator 2 controls the majority of the NEC product portfolio of projectors, large-screen displays and desktop monitors. Through an easy to use and sophisticated graphical user interface (GUI), businesses can reduce their support costs by remotely diagnosing and correcting technology issues.

System administrators and IT personnel also can take a proactive approach toward the maintenance of projector lamps, filters, and fan cleaning, in order to gain better control of all their NEC assets.

“NaViSet Administrator 2 links a company’s NEC products together into an intuitive ecosystem for easier asset management,” said Keith Yanke, Senior Director of Product Marketing at NEC Display Solutions. “Organizations do not have to create their own

management software packages and instead can remain focused on core strategic activities.”

NaViSet Administrator 2 is designed to run from a central location and provides monitoring, asset management and control functionality of remote displays. It can continuously run to provide automatic monitoring and control of devices while alerts can be set when specified parameters within the display device are changed.

NaViSet Administrator 2 includes the following features:

- Sophisticated Graphical User Interface, which controls display settings with ease and precision
- Remote control of NEC desktop displays and information gathering made easy using the Display Data Channel/Command Interface (DDC/CI) protocol
- Projector and Large-screen LCD support through LAN or RS-232C connections
- Remote diagnostics, failure alerting enabled through advanced device monitoring and logging
- Automation of device management, such as alerts sent via email, simplified via the NaViSet Administrator 2 task function
- Report creation as well as data import and export functionality

For more information about the free NaViSet Administrator 2 application, please visit the NEC Display Solutions [website](#).
