**NEC DISPLAY SOLUTIONS PARTNERS WITH HIPERWALL FOR
SOFTWARE ALLOWING HIGHER RESOLUTION VIDEO WALLS**

***Namesake Software Enables Stored Content and Live Feeds to be Resized
and Relocated Anywhere on Large Canvas of Screens***

CHICAGO – November 9, 2010 – [NEC Display Solutions of America](#), a leading provider of [commercial LCD](#) display and [projector](#) solutions, announced today a partnership with Hiperwall, Inc., for powerful software that allows video walls to go far beyond 1080p. This capability allows for limitless pixel-for-pixel clarity not possible before.

A 3x3 NEC video wall with Hiperwall technology can be seen in NEC Booth No. 401 at Customer Engagement Technology World at the Javits Convention Center in New York on November 10-11.

An innovator of video wall technology, Hiperwall lets users resize and relocate multiple simultaneous content objects anywhere on a video wall, within a single monitor or across multiple displays – similar to moving and resizing windows on the desktop of a personal computer. Hiperwall also provides advanced capabilities like zoom, rotation, shading, transparency, and scheduling, enabling users to display content with increased flexibility and effectiveness.

Hiperwall technology, combined with NEC's NET-SBC-01/02/03 internal computers, and NEC's MultiSync X462UN and P Series displays, are designed for video wall

configurations in professional digital signage environments, including lobbies, public venues, retail stores, transportation facilities and broadcasting.

“Our market-leading, professional-grade displays form some of the most beautiful video canvases in the world,” said Ashley Flaska, Vice President of Marketing for NEC Display. “Pairing our X Series displays with Hiperwall technology makes for a very powerful combination that many of our corporate, retail and higher-education customers will appreciate.”

The X462UN’s ultra-narrow bezel allows for a screen-to-screen distance between two neighboring X462UN displays of only 7.3 millimeters. Hiperwall combined with the X462UN allows for video walls of any size. The barely discernable transition gap between displays ensures a homogenous picture across the matrix.

“We’re excited to combine our market-leading video wall technology with NEC’s innovative display walls,” said Hiperwall CEO Jeff Greenberg. “The market for video walls is growing rapidly, and the NEC/Hiperwall partnership will help fuel this growth by making video walls simpler, more powerful, more scalable and more affordable than ever.”

The key breakthrough of the Hiperwall system is a distributed software architecture that applies classical parallel processing techniques to overcome the performance limitations typically associated with the display of large or numerous items on multiple display devices. The result is a high-performance, high-resolution visualization system that provides high scalability without requiring the need for any specialized hardware infrastructure. This results in multiple technical and business advantages.

About VUKUNET

VUKUNET, from NEC Display Solutions of America, is the engine that powers the digital out-of-home advertising business. VUKUNET is the only universal ad serving platform that drives ads to any digital out-of-home network, regardless of content management system. VUKUNET makes the buying, flighting and reporting of digital out-of-home ad campaigns easy. For additional information about VUKUNET, visit www.vukunet.com or call (877) 805-VUKU. For VUKUNET logos and digital images, please visit <http://www.vukunet.com/pressresources.aspx>.

About Hiperwall, Inc.

Although video walls have been around for decades, they are usually too expensive and complex for all but the largest of organizations. Hiperwall has eliminated these barriers by developing a revolutionary software-based video wall system that is completely hardware agnostic, allowing our customers to deploy systems with nothing more than commonly available PCs, monitors and network equipment. As a result, Hiperwall is easier to install, simpler to use, more flexible, more scalable, has a smaller footprint, lower power consumption and is more affordable than legacy hardware-based systems.
