WARNING

TO PREVENT FIRE OR SHOCK HAZARDS, DO NOT EXPOSE THIS UNIT TO RAIN OR MOISTURE. ALSO, DO NOT USE THIS UNIT’S POLARIZED PLUG WITH AN EXTENSION CORD RECEPTACLE OR OTHER OUTLETS UNLESS THE PRONGS CAN BE FULLY INSERTED.

REFRAIN FROM OPENING THE CABINET AS THERE ARE HIGH VOLTAGE COMPONENTS INSIDE. REFER SERVICING TO QUALIFIED SERVICE PERSONNEL.

CAUTION

CAUTION: TO REDUCE THE RISK OF ELECTRIC SHOCK, MAKE SURE POWER CORD IS UNPLUGGED FROM WALL SOCKET. TO FULLY DISENGAGE THE POWER TO THE UNIT, PLEASE DISCONNECT THE POWER CORD FROM THE AC OUTLET. DO NOT REMOVE COVER (OR BACK). NO USER SERVICEABLE PARTS INSIDE. REFER SERVICING TO QUALIFIED SERVICE PERSONNEL.

This symbol warns user that uninsulated voltage within the unit may have sufficient magnitude to cause electric shock. Therefore, it is dangerous to make any kind of contact with any part inside this unit.

This symbol alerts the user that important literature concerning the operation and maintenance of this unit has been included. Therefore, it should be read carefully in order to avoid any problems.

CAUTION: Please use the power cord provided with this display in accordance with the table below. If a power cord is not supplied with this equipment, please contact your supplier. For all other cases, please use a power cord that matches the AC voltage of the power outlet and has been approved by and complies with the safety standard of your particular country.

- The intended primary use of this product is as an Information Technical Equipment in an office or domestic environment.
- The product is intended to be connected to a computer and is not intended for the display of television broadcast signals.
Registration Information

Canadian Department of Communications Compliance Statement

DOC: This Class B digital apparatus meets all requirements of the Canadian Interference-Causing Equipment Regulations.
C-UL: Bears the C-UL Mark and is in compliance with Canadian Safety Regulations according to CAN/CSA C22.2 No. 60950-1.

FCC Information

1. Use the attached specified cables with the MultiSync P232W/MultiSync P241W monitor so as not to interfere with radio and television reception.
   (1) The power supply cord you use must have been approved by and comply with the safety standards of U.S.A., and meet the following condition.

   | Power supply cord | Non shield type, 3-conductor |
   | Length            | 2.0 m                       |
   | Plug shape        | U.S.A                       |

   (2) Please use the supplied shielded video signal cable, 15-pin mini D-SUB to D-SUB cable or DVI-D to DVI-D cable. Use of other cables and adapters may cause interference with radio and television reception.

2. This equipment has been tested and found to comply with the limits for a Class B digital device, pursuant to part 15 of the FCC Rules. These limits are designed to provide reasonable protection against harmful interference in a residential installation. This equipment generates, uses, and can radiate radio frequency energy, and, if not installed and used in accordance with the instructions, may cause harmful interference to radio communications. However, there is no guarantee that interference will not occur in a particular installation. If this equipment does cause harmful interference to radio or television reception, which can be determined by turning the equipment off and on, the user is encouraged to try to correct the interference by one or more of the following measures:
   • Reorient or relocate the receiving antenna.
   • Increase the separation between the equipment and receiver.
   • Connect the equipment into an outlet on a circuit different from that to which the receiver is connected.
   • Consult your dealer or an experienced radio/TV technician for help.

   If necessary, the user should contact the dealer or an experienced radio/television technician for additional suggestions. The user may find the following booklet, prepared by the Federal Communications Commission, helpful: “How to Identify and Resolve Radio-TV Interference Problems.” This booklet is available from the U.S. Government Printing Office, Washington, D.C., 20402, Stock No. 004-000-00345-4.

Declaration of Conformity

This device complies with Part 15 of FCC Rules. Operation is subject to the following two conditions. (1) This device may not cause harmful interference, and (2) this device must accept any interference received, including interference that may cause undesired operation.

| U.S. Responsible Party: | NEC Display Solutions of America, Inc. |

Type of Product: Display Monitor
Equipment Classifcation: Class B Peripheral
Model: MultiSync P232W (L231V1)
MultiSync P232W (P232W)
MultiSync P232W (P232W-BK)
MultiSync P241W (L240UN)
MultiSync P241W (P241W)
MultiSync P241W (P241W-BK)

We hereby declare that the equipment specified above conforms to the technical standards as specified in the FCC Rules.
Recommended use

**Safety Precautions and Maintenance**

**FOR OPTIMUM PERFORMANCE, PLEASE NOTE THE FOLLOWING WHEN SETTING UP AND USING THE LCD COLOR MONITOR:**

- **DO NOT OPEN THE MONITOR.** There are no user serviceable parts inside and opening or removing covers may expose you to dangerous shock hazards or other risks. Refer all servicing to qualified service personnel.
- Do not spill any liquids into the cabinet or use your monitor near water.
- Do not insert objects of any kind into the cabinet slots, as they may touch dangerous voltage points, which can be harmful or fatal or may cause electric shock, fire or equipment failure.
- Do not place any heavy objects on the power cord. Damage to the cord may cause shock or fire.
- Do not place this product on a sloping or unstable cart, stand or table, as the monitor may fall, causing serious damage to the monitor.
- The power supply cord you use must have been approved by and comply with the safety standards of your country. (Type H05VV-F 3G 1mm² should be used in Europe).
- In UK, use a BS-approved power cord with molded plug having a black (5A) fuse installed for use with this monitor.
- Do not place any objects onto the monitor and do not use the monitor outdoors.
- The lamps in this product contain mercury. Please dispose according to state, local or federal law.*
- Do not bend power cord.
- Do not use monitor in high temperature, humid, dusty, or oily areas.
- Do not cover vent on monitor.
- Vibration can damage the backlight. Do not install where the monitor will be exposed to continual vibration.
- If monitor or glass is broken, do not come in contact with the liquid crystal and handle with care.
- To prevent damage to the LCD monitor caused by tipping over due to earthquakes or other shocks, make sure to install the monitor in a stable location and take measures to prevent falling.

Immediately turn off the power, unplug your monitor from the wall outlet and move to a safe location then refer servicing to qualified service personnel under the following conditions. If the monitor is used in this condition, the monitor may cause fall, fire and electric shock:

- If the monitor stand has been cracked or peeled.
- If the monitor has been wobbled.
- If the monitor has an unusual odor.
- When the power supply cord or plug is damaged.
- If liquid has been spilled, or objects have fallen into the monitor.
- If the monitor has been exposed to rain or water.
- If the monitor has been dropped or the cabinet damaged.

- If the monitor does not operate normally by following operating instructions.

  - Allow adequate ventilation around the monitor so that heat can properly dissipate. Do not block ventilated openings or place the monitor near a radiator or other heat sources. Do not put anything on top of monitor.
  
  - The power cable connector is the primary means of detaching the system from the power supply. The monitor should be installed close to a power outlet which is easily accessible.
  
  - Handle with care when transporting. Save packaging for transporting.
  
  - Do not touch LCD panel surface while transporting, mounting and setting. Applying pressure on the LCD panel can cause serious damage.

**Image Persistence:** Image persistence is when a residual or “ghost” image of a previous image remains visible on the screen. Unlike CRT monitors, LCD monitors’ image persistence is not permanent, but constant images being displayed for a long period of time should be avoided.

To alleviate image persistence, turn off the monitor for as long as the previous image was displayed. For example, if an image was on the monitor for one hour and a residual image remains, the monitor should be turned off for one hour to erase the image.

**NOTE:** As with all personal display devices, NEC DISPLAY SOLUTIONS recommends using a moving screen saver at regular intervals whenever the screen is idle or turning off the monitor when not in use.

* Only for P241W
CORRECT PLACEMENT AND ADJUSTMENT OF THE MONITOR CAN REDUCE EYE, SHOULDER AND NECK FATIGUE. CHECK THE FOLLOWING WHEN YOU POSITION THE MONITOR:

- For optimum performance, allow 20 minutes for the display to warm up.
- Adjust the monitor height so that the top of the screen is at or slightly below eye level. Your eyes should look slightly downward when viewing the middle of the screen.
- Position your monitor no closer than 40 cm (15.75 inches) and no further away than 70 cm (27.56 inches) from your eyes. The optimal distance is 50 cm (19.69 inches).
- Rest your eyes periodically by focusing on an object at least 20 feet away. Blink often.
- Position the monitor at a 90° angle to windows and other light sources to minimize glare and reflections. Adjust the monitor tilt so that ceiling lights do not reflect on your screen.
- If reflected light makes it hard for you to see your screen, use an anti-glare filter.
- Clean the LCD monitor surface with a lint-free, non-abrasive cloth. Avoid using any cleaning solution or glass cleaner!
- Adjust the monitor’s brightness and contrast controls to enhance readability.
- Use a document holder placed close to the screen.
- Position whatever you are looking at most of the time (the screen or reference material) directly in front of you to minimize turning your head while you are typing.
- Avoid displaying fixed patterns on the monitor for long periods of time to avoid image persistence (after-image effects).
- Get regular eye checkups.

Ergonomics
To realize the maximum ergonomics benefits, we recommend the following:
- To avoid eye fatigue, adjust the brightness to a moderate setting. Place a sheet of white paper next to the LCD screen for luminance reference.
- Do not position the Contrast control to its maximum setting.
- Use the preset Size and Position controls with standard signals.
- Use the preset Color Setting.
- Use non-interlaced signals with a vertical refresh rate of more than 60 Hz.
- Do not use primary color blue on a dark background, as it is difficult to see and may produce eye fatigue due to insufficient contrast.

Cleaning the LCD Panel
- When the LCD is dusty, please gently wipe with a soft cloth.
- Please do not rub the LCD panel with hard or coarse material.
- Please do not apply pressure to the LCD surface.
- Please do not use OA cleaner as it will cause deterioration or discoloration on the LCD surface.

Cleaning the Cabinet
- Unplug the power supply
- Gently wipe the cabinet with a soft cloth
- To clean the cabinet, dampen the cloth with a neutral detergent and water, wipe the cabinet and follow with a dry cloth.

NOTE: Many plastics are used on the surface of the cabinet. DO NOT clean with benzene, thinner, alkaline detergent, alcoholic system detergent, glass cleaner, wax, polish cleaner, soap powder, or insecticide. Do not touch rubber or vinyl to the cabinet for a long time. These types of fluids and fabrics can cause the paint to deteriorate, crack or peel.

For more detailed information on setting up a healthy work environment, write to the American National Standard for Human Factors Engineering of Computer Workstations - ANSI/HFES 100-2007 - The Human Factors Society, Inc. P.O. Box 1369, Santa Monica, California 90406.
Product Features

- DisplayPort and HDMI*2, which support 10-bit color depth.
- 5-setting, easy-to-switch picture mode (see page 13).
- Accurate color reproduction for high-end graphic design (see page 17).
- Quick warmup time.
- Picture-in-picture/picture-by-picture dual-screen mode includes real-time preview (see page 14).
- USB hub with two upstream ports (see page 14).
- MultiProfiler extends color management feature, including automatic ICC profile updates (ICC profile Emulation, Printer Emulation) (see page 17).
- Low power consumption via ECO MODE (see page 12).
- Small footprint design.

Contents

Your new NEC monitor box* should contain the following:

- MultiSync monitor with tilt/swivel/pivot/height adjust stand
- Power Cord
- Video Signal Cable (DVI-D to DVI-D cable)
- Video Signal Cable (Mini D-SUB 15 pin to Mini D-SUB 15 pin)
- DisplayPort cable
- USB Cable
- Setup Manual
- CD-ROM
- Screw (x 4) (to mount the monitor to a flexible arm (page 10))

NOTE: This monitor can be equipped with optional “MultiSync Sound bar”.
Please ask your dealer or check our website http://www.necdisplaysolution.com

* Remember to save your original box and packing material to transport or ship the monitor.

*1 Type and number of power cords included will depend on the where the LCD monitor is to be shipped. When more than one power cord is included, please use a power cord that matches the AC voltage of the power outlet and has been approved by and complies with the safety standard of your particular country.

*2 Only for P232W.
Quick Start

To connect the LCD monitor to your system, follow these instructions:

NOTE: Make sure to read "Recommended Use" (page 3) before installation.

1. Turn off the power to your computer.

2. For a PC or MAC with DVI digital output: Connect the DVI signal cable to the connector of the display card in your system (Figure A.1). Tighten all screws.
   For a PC with Analog output: Connect a 15-pin mini D-SUB to DVI-A signal cable (not included) to the connector of the display card in your system (Figure A.2).
   For a MAC: Connect a Macintosh cable adapter (not included) to the computer, then attach the 15-pin mini D-SUB signal cable to the Macintosh cable adapter (Figure A.3).

NOTE: Some Macintosh systems do not require a Macintosh cable adapter.

For a PC with DisplayPort output: Connect the DisplayPort cable to the connector of the display card in your system (Figure A.4).

NOTE: 1. Please use a DisplayPort cable with a DisplayPort logo.
       2. When removing the DisplayPort cable, hold down the top button to release the lock.

3. Height adjustment is locked by lock button. Place hand on top of the monitor to push down the screen to the lowest position. Slide the lock button to unlock (Figure B.1).

NOTE: Handle with care when unlocking stand.
       Place hands on each side of the monitor to tilt the LCD panel 30-degree angle and lift up to the highest position. Slide the cable cover up (Figure B.2).

NOTE: Cable cover is not removable.
4. Connect all cables to the appropriate connectors (Figure C.1). When using the USB cable, connect the B type connector to the USB upstream port on the right back side of the monitor and the A type connector to the downstream port on the computer (Figure C.1a). If using the cord from a USB device, plug into one of the downstream ports of the monitor.

**NOTE:** Incorrect cable connections may result in irregular operation, damage display quality/components of LCD module and/or shorten the module’s life.

**Figure C.1**

5. To keep the cables neatly organized, place them into the cable management system that is built into the stand. Place the cables in the hooks firmly and evenly (Figure C.2 and Figure C.3).

6. Please check that you can still rotate, raise and lower the monitor screen when you have installed the cables.

**Figure C.2**

**Figure C.3**

* NEC optional product attachment (Only for P241W). Do not use this connector unless specified.

*1 Only for P232W

*2 DVI-D for P232W

*3 Only for P241W

---

**English-7**
7. Slide down the cable cover (Figure D.1).
8. Connect one end of the power cord to the AC inlet on the back of the monitor and the other end to the power outlet.

**NOTE:** Please refer to Caution section of this manual for proper selection of AC power cord.

![Figure D.1](image)

9. Turn on the monitor with the front power button (Figure E.1) and the computer.
10. No Touch Auto Adjust automatically adjusts the monitor to optimal settings upon initial setup for most timings. For further adjustments, use the following OSD controls:
   - AUTO CONTRAST (Analog input only)
   - AUTO ADJUST (Analog input only)

   Refer to the Controls section of this User’s Manual for a full description of these OSD controls.

**NOTE:** If you have any problems, please refer to the Troubleshooting section of this User’s Manual.

![Figure E.1](image)

**Raise and Lower Monitor Screen**

The monitor may be raised or lowered in either Portrait or Landscape mode.
To raise or lower screen, place hands on each side of the monitor and lift or lower to the desired height (Figure RL.1).

**NOTE:** Handle with care when raising or lowering the monitor screen.
Screen Rotation
Before rotating, the screen must be raised to the highest level and tilt to avoid knocking the screen on the desk or pinching your fingers. Disconnect all cables.
To raise the screen, place hands on each side of the monitor and lift up to the highest position (Figure RL.1).
To rotate screen, place hands on each side of the monitor screen and turn clockwise from Landscape to Portrait or counter-clockwise from Portrait to Landscape (Figure R.1).
To rotate OSD menu between landscape and portrait, refer to “Controls” section.

![Figure R.1](image)

Tilt
Grasp top and bottom sides of the monitor screen with your hands and adjust the tilt as desired (Figure TS.1).

![Figure TS.1](image)

NOTE: Handle with care when tilting the monitor screen.

Swivel
Grasp both sides of the monitor screen with your hands and adjust the swivel as desired (Figure TS.2).

![Figure TS.2](image)
Flexible Arm Installation
This LCD monitor is designed for use with a flexible arm.

To prepare the monitor for alternate mounting purposes:

- Follow the instructions provided by the manufacturer of the display mount.
- To meet the safety requirements, the monitor must be mounted to an arm that supports the weight of the monitor. See page 26-27 for details. Remove the monitor stand before mounting.

Remove Monitor Stand for Mounting
To prepare the monitor for alternate mounting purposes:

1. Disconnect all cables.
2. Place hands on each side of the monitor and lift up to the highest position.
3. Place monitor face down on a non-abrasive surface (Figure S.1).
4. Place one hand around the base and one hand on the Quick Release Lever. Push and hold the Quick Release Lever in the direction indicated by the arrows (Figure S.1).
5. Lift up the stand to unhook it from the monitor (Figure S.1).

The monitor can now be mounted using an alternate method. Reverse process to reattach stand.

NOTE: Handle with care when removing monitor stand.

Mount Flexible arm
This LCD monitor is designed for use with a flexible arm.

1. Follow the instructions on how Remove Monitor Stand for Mounting to remove the stand.
2. Using the 4 screws from the stand removal and attach the arm to the monitor (Figure F.1).

Caution: Use ONLY the screws (4 pcs) that are included or the screws M4 size (Length: thickness of bracket and washer + 10-12 mm) when mounting to avoid damage to the monitor and stand. To fulfill the safety requirements the monitor must be mounted to an arm which guaranties the necessary stability under consideration of the weight of the monitor. The LCD monitor should only be used with an approved arm (e.g. GS mark).

NOTE: Tighten all screws. (recommended Fasten Force: 98 - 137N•cm)
## Controls

**OSD (On-Screen Display) control buttons on the front of the monitor function as follows:**

To access OSD menu, press the MENU button.
To change signal input, press the SELECT button.

**NOTE:** OSD must be closed in order to change signal input.

### Controls Table

<table>

</tr>
<tr>
<td>9 <strong>KEY GUIDE</strong></td>
<td>The Key Guide appears on screen when the OSD control menu is accessed. The Key Guide will rotate when the OSD control menu is rotated*.</td>
</tr>
</tbody>
</table>

* The “LEFT/RIGHT” and “UP/DOWN” buttons functionality is interchangeable depending on the orientation (Landscape/Portrait) of the OSD.
* When HOTKEY function is OFF, this function is disabled.
*1 PICTURE MODE menu.
Press the UP/DOWN button to select PICTURE MODE. In PIP or PICTURE BY PICTURE mode, picture mode can be selected for main and sub window independently by pressing LEFT/RIGHT button.
** PIP MODE menu.
Press the UP/DOWN button to select sub-window ON/OFF. Press the LEFT/RIGHT button to swap main window and sub window.

### SETTING OSD LANGUAGE

- Use the control keys (LEFT/RIGHT or UP/DOWN or MENU) to access the “LANGUAGE SELECTION” menu.
- Press the LEFT/RIGHT or UP/DOWN buttons to select the desired OSD language.
- To exit from this OSD menu, press EXIT button.

**NOTE:** Setting the OSD language is only necessary upon initial setup. The OSD language will stay the same until changed by the user.
Brightness/Contrast Controls

BRIGHTNESS
Adapts the overall image and background screen brightness.

NOTE: The brightness level is adjusted using the backlight output.
The display will digitally compensate for low or high brightness levels.
If digital compensation occurs, the brightness value on the OSD will change to magenta.

NOTE: The optimal display performance will be in the range where the OSD brightness value is black. When the display cannot achieve the desired brightness, the numerical brightness value on the OSD will blink.

NOTE: For low brightness settings, the display will automatically compensate by adjusting the screen contrast to achieve the desired brightness. This will result in a reduced contrast ratio and the OSD indicator will change to magenta.

NOTE: For high brightness settings, the display will automatically compensate by turning down uniformity compensation in order to achieve the desired brightness. The OSD indicator will change to magenta and this may result in decreased uniformity.

CONTRAST (Analog input only)
Adapts the overall image and background screen brightness by input signal level.

NOTE: It is recommended to use BRIGHTNESS to adjust screen brightness for lower power consumption and improved image quality.

ECO MODE
Decreases the amount of power consumed by reducing the brightness level.
OFF: No function.
MODE1: Decreases the brightness range up to about 64.3%. (P232W)
Decreases the brightness range up to about 200 cd/m². (P241W)
MODE2: Decreases the brightness range up to about 28.6%. (P232W)
Decreases the brightness range up to about 100 cd/m². (P241W)

BLACK
Adapts the black luminance.
When low settings are selected that cannot be displayed, the indicator on the OSD will turn magenta.

Auto Adjust (Analog input only)

AUTO ADJUST
Automatically adjusts the Image Position and H. SIZE settings and FINE settings.

AUTO CONTRAST
Adjusts the image displayed for non-standard video inputs.

Image Controls

LEFT / RIGHT
Controls Horizontal Image Position within the display area of the LCD.

DOWN / UP
Controls Vertical Image Position within the display area of the LCD.

H.SIZE (V.SIZE) (Analog input only)
Adjusts the horizontal size by increasing or decreasing this setting.
If the "AUTO ADJUST" function do not give you a satisfactory picture setting, a further tuning can be performed using the "H.SIZE (or V.SIZE)" function (dot clock). For this a Moiré test pattern could be used. This function may alter the width of the picture. Use LEFT/RIGHT Menu to center the image on the screen. If the H.SIZE (or V.SIZE) is wrongly calibrated, the result would look like the left drawing. The image should be homogeneous.

![Image of correct and incorrect H.SIZE values]
FINE (Analog input only)
Improves focus, clarity and image stability by increasing or decreasing this setting. If the "AUTO ADJUST" function and the "H.SIZE" function do not give you a satisfactory picture setting, a fine tuning can be performed using the "FINE" function. For this a Moiré test pattern could be used. If the FINE value is wrongly calibrated, the result would look like the left drawing. The image should be homogeneous.

AUTO FINE (Analog input only)
This function automatically and periodically adjusts the "FINE" setting for change in signal condition. This function adjusts approximately every 33 minutes.

EXPANSION
Sets the zoom method.
FULL: The image is expanded to full screen, regardless of the resolution.
ASPECT: The image is expanded without changing the aspect ratio.
OFF: The image is not expanded.
CUSTOM: Refer to the Advanced OSD menu for detailed instructions.

SHARPNESS
This function is digitally capable of keeping crisp image at any time. It is continuously adjustable to get as distinct or as soft an image as your prefer and set independently by different timings.

Color Control Systems

PICTURE MODE
Change the Picture mode that is most suitable for the type of content that is shown. You can change up to 5 types. See Advanced menu Tag1 PICTURE MODE (page 18) and “Using the PICTURE MODE function” (page 17) for more information.

WHITE
Adjust the white temperature by NATIVE or increasing or decreasing this setting. A lower color temperature will make the screen reddish and a higher color temperature will make the screen bluish. NATIVE is a default color temperature of LCD panel. 6500K is recommended for general graphic design and 5000K is recommended for print matching.

ADJUST
HUE: Adjusts the hue of each color*. The change in color will appear on screen and the menu color bars will show the amount of adjustment.
OFFSET: Adjusts the color brightness of each color*. Press “RIGHT” button and the color brightness increases.
SATURATION: Adjusts the color depth of each color*. Press the “RIGHT” button and the color vividness increases.
*1: RED, YELLOW, GREEN, CYAN, BLUE and MAGENTA.

ADVANCED SETTING
Shows ADVANCED MENU. See page 18 for detailed information. Set PICTURE MODE in detail in Advanced manual Tag1.
Tools

PIP MODE
Select PIP MODE, OFF/PIP/PICTURE BY PICTURE - ASPECT/PICTURE BY PICTURE - FULL. You can select individual PICTURE MODE in each screen. This display can display 2 inputs at a time.

OFF  PIP*  PICTURE BY PICTURE - ASPECT*  PICTURE BY PICTURE - FULL*

IMAGE ROTATION: ON / SUB IMAGE ROTATION: ON

OFF  PIP*  PICTURE BY PICTURE - ASPECT*  PICTURE BY PICTURE - FULL*

PIP INPUT
Selects the PIP input signal.

PIP LEFT/RIGHT
Controls the horizontal position of the Picture in Picture window in PIP mode.

PIP DOWN/UP
Controls the vertical position of the Picture in Picture window in PIP mode.

PIP SIZE
Selects the size of the sub-picture used in PIP mode.

USB SELECTION
Change USB upstream input associated with the current display input, 1 or 2. When connecting a computer to each of the upstream ports, the monitor's USB downstream ports can be used by selecting this setting for the current input signal.

You can change the active display and upstream USB port combination by using the Input button (see page 11). You can set the USB selection for each input signals in Advanced menu (see page 22).

When using only one upstream port, the connected upstream port is used by default.

NOTE: To avoid data loss, before changing USB upstream ports, ensure that no USB storage devices are in use by the operating system of the computer attached to the USB upstream port.

EDID EXTENSION (DVI Input Only)
A communication setting with input device, containing signal timing.

NORMAL: When a PC or other computer equipment is connected, select “NORMAL”.

ENHANCED: Alternate setting for non-PC devices such as DVD players or game consoles. When a DVD player or other type of high definition device is connected, select “ENHANCED”.

NOTE: Interlaced signals (480i, 576i, 1080i) are not supported. If you have any problems, please refer to the Troubleshooting section of this User’s Manual. When EDID EXTENSION has been changed, the connected equipment has to be restarted.

VIDEO DETECT
Selects the method of video detection when more than one video input is connected.

FIRST: When current video input signal is not present, then the monitor searches for a video signal from the other video input port. If the video signal is present in the other port, then the monitor switches the video source input port to the new found video source automatically. The monitor will not look for other video signals while the current video source is present.

LAST: When the monitor is displaying a signal from the current source and a new secondary source is supplied to the monitor, then the monitor will automatically switch to the new video source. When current video input signal is not present, then the monitor searches for a video signal from the other video input port. If the video signal is present in the other port, then the monitor switches the video source input port to the new found video source automatically.

NONE: The Monitor will not search the other video input port unless the monitor is turned on.

* “ADJUST” setting or Print Emulation setting by MultiProfiler will result the following cases depending on the setting conditions.
Setting for only one screen: the setting result is reflected on the corresponding Window (Main or Sub).
Individual setting for each screen: the setting result is reflected on Main Window only. Then Warning (6-AXIS SUB:OFF) will appear on screen.
Same setting for both screens: the setting result is reflected on both Main and Sub Windows.
OFF TIMER
Monitor will automatically power-down when you have selected a pre-determined amount of time. Before powering off, a message will appear on the screen asking if you want to delay the turn off time by 60 minutes. Press any OSD button to delay the power-down time.

OFF MODE
The Intelligent Power Manager allows the monitor to enter into a power saving mode after a period of inactivity. The OFF MODE has three settings.
OFF: Monitor does not go into power save mode when the input signal is lost.
STANDARD: Monitor enters power save mode automatically when the input signal is lost.
OPTION: Monitor enters power save mode automatically when the amount of surrounding light goes below the level that is determined by the user. The level can be adjusted in OFF MODE SETTING in Tag 6 of the Advanced OSD menu.
When in power save mode, the LED on the front of the monitor blinks amber. While in power save mode, push any of the front buttons, except for POWER and SELECT to return to normal.
When the amount of surrounding light returns to normal levels, the monitor will automatically return to normal mode.

MENU Tools
LANGUAGE
OSD control menus are available in nine languages.

OSD LEFT/RIGHT
You can choose where you would like the OSD control image to appear on your screen. Selecting OSD Location allows you to manually adjust the position of the OSD control menu left or right.

OSD DOWN/UP
You can choose where you would like the OSD control image to appear on your screen. Selecting OSD Location allows you to manually adjust the position of the OSD control menu Up or Down.

OSD TURN OFF
The OSD control menu will stay on as long as it is use. You can select how long the monitor waits after the last touch of a button to shut off the OSD control menu. The preset choices are 10-120 seconds by 5-second increments.

OSD LOCK OUT
This control completely locks out access to all OSD control functions. When attempting to activate OSD controls while in the Lock Out mode, a screen will appear indicating the OSD controls are locked out.
There are four types of OSD LOCK OUT:
OSD LOCK OUT with no control: To activate the OSD Lock Out function, press SELECT, then “RIGHT” button and hold down simultaneously. To deactivate the OSD Lock Out, press SELECT, then “RIGHT” button and hold down simultaneously while in the OSD menu. No controls can be adjusted while in the lock out mode.
OSD LOCK OUT with BRIGHTNESS (only) control: To activate the OSD Lock Out function, press SELECT, then “DOWN” and “LEFT” buttons and hold down simultaneously. To deactivate the OSD Lock Out, press SELECT, then “DOWN” and “LEFT” buttons and hold down simultaneously while in the OSD menu. BRIGHTNESS can be adjusted while in this lock out mode.
CUSTOM: Refer to the Advanced OSD Menu.

OSD TRANSPARENCY
Adjusts the transparency of the OSD Menu.

OSD COLOR
Adjusts the color of the OSD Menu. “Tag window frame color”, “Item select color” and “Adjust window frame color” can be changed to Red, Green, Blue, or Gray.

RESOLUTION NOTIFIER
This optimal resolution is 1920 x 1200. If ON is selected, a message will appear on the screen after 30 seconds, notifying you that the resolution is not at 1920 x 1200.

HOT KEY
You can adjust the BRIGHTNESS directly. When this function is set to ON, you can adjust the brightness with “LEFT” or “RIGHT”, while the OSD menu is off. The standard OSD can be accessed with the EXIT button. When this function is set to OFF, some buttons are disabled (see page 11).
FACTORY PRESET
Selecting FACTORY PRESET allows you to reset all OSD control settings (BRIGHTNESS, CONTRAST, ECOMODE, BLACK, IMAGE CONTROL, COLOR CONTROL SYSTEM, SHARPNESS, PIP MODE, PIP INPUT, PIP LEFT/RIGHT, PIP DOWN/UP, PIP SIZE, USB SELECTION, EDID EXTENSION, OFF TIMER, OFF MODE, OSD LEFT/RIGHT, OSD UP/DOWN, OSD TURN OFF, OSD TRANSPARENCY) back to the factory settings. Individual settings can be reset by highlighting the control to be reset and pressing the RESET button.

NOTE: If you want reset to include the Picture calibration settings and SELF COLOR CORRECTION settings, please use FACTORY PRESET in Advanced OSD menu (see page 24).

ECO Information
CARBON SAVINGS: Displays the estimated carbon savings information in kg.
CARBON USAGE: Displays the estimated carbon usages information in kg.
This is the arithmetic estimation, not actual measurement value.
This estimation is based without any options.
COST SAVINGS: Displays the electricity cost savings in balance.
CARBON CONVERT SETTING: Adjusts the carbon footprint factor in the carbon saving calculation. This initial setting is based on the OECD (2008 Edition).
CURRENCY SETTING: Displays electricity pricing in 6 currency units.
CURRENCY CONVERT SETTING: Displays electricity savings in kW/hour (US Currency is default).
NOTE: This model's initial setting is “Currency = US$” and its Currency Convert setting = $0.11.
This setting can be changed by using the ECO information menu.
If you want to use the French setting, please refer to steps below:
1. Open menu by pressing the Menu button and select the ECO information menu using the “LEFT” or “RIGHT” key.
2. Select CURRENCY SETTING item pressing the “UP” or “DOWN” key.
3. The French currency unit is Euro (€). You can adjust currency setting to Euro icon (€) from US dollar ($) using the “LEFT” or “RIGHT” key in Current setting item.
4. Select CURRENCY CONVERT SETTING item using the “UP” or “DOWN” key.
   This initial Euro (€) setting is Germany of OECD (2007 Edition).
   Please check receipt of French’s electricity prices or OECD data for French.
   French of OECD (2007 Edition) was €0.12.
5. Adjust CURRENCY CONVERT SETTING item using the “LEFT” or “RIGHT” key.

Information
Provides information about the current resolution display (Main picture), current USB input setting and technical data including the preset timing being used and the horizontal and vertical frequencies. Indicates the model and serial numbers of your monitor.

OSD Warning
OSD Warning menus disappear with EXIT button.
NO SIGNAL: This function gives a warning when there is no Horizontal or Vertical Sync. After power is turned on or when there is a change of input signal, the No Signal window will appear.
RESOLUTION NOTIFIER: This function warns if resolution other than the optimized resolution is used. After power is turned on or when there is a change of input signal or the video signal doesn’t have proper resolution, the Resolution Notifier window will open. This function can be disabled in the MENU Tools.
OUT OF RANGE: This function gives a recommendation of the optimized resolution and refresh rate. After the power is turned on or there is a change of input signal or if the video signal doesn’t have proper timing, the Out Of Range menu will appear.
INTERLACED SIGNALS ARE NOT SUPPORTED: This function gives a warning when the interlace signal is used. While the image is visible, change the signal of the device from interlaced to progressive (non-interlaced).
See "No Picture" in Troubleshooting for detailed information.

If you need detailed information about the controls, please use the ADVANCED OSD menu.
Using the PICTURE MODE function

Choose the Picture mode that is most suitable for the type of content that is shown. There are several types of mode (sRGB, REC-Bt709, HIGH BRIGHT, FULL, DICOM, PROGRAMMABLE).

- Each PICTURE MODE includes BRIGHTNESS, AUTO BRIGHTNESS, WHITE, Color Gamut, GAMMA, BLACK, UNIFORMITY, COLOR VISION EMU, METAMERISM, RESPONSE IMPROVE, AMBIENT LIGHT COMP., (6-AXIS ADJUST) settings. You can change these settings in Tag1 advanced menu.

### The type of PRESET

<table>
<thead>
<tr>
<th>PRESET</th>
<th>PURPOSE</th>
</tr>
</thead>
<tbody>
<tr>
<td>sRGB</td>
<td>Standard color space used for the Internet, Windows operating systems and digital cameras. Recommended setting for general color management.</td>
</tr>
<tr>
<td>REC-Bt709</td>
<td>Color setting for High-definition television.</td>
</tr>
<tr>
<td>HIGH BRIGHT</td>
<td>Factory setting. Highest brightness setting. Provides lowest power consumption when kept at factory setting.</td>
</tr>
<tr>
<td>FULL</td>
<td>Native display color gamut. Suitable for use with color managed applications. Use ICC color profile included in the enclosed CD-ROM.</td>
</tr>
<tr>
<td>DICOM**</td>
<td>Medical settings for X-ray imaging view. Setting that conforms to the DICOM standard for the Grayscale Standard Display Function.</td>
</tr>
<tr>
<td>PROGRAMMABLE</td>
<td>For “MultiProfiler” software or the Hardware Calibration settings by NEC Display Solutions software (some OSD settings are disabled).</td>
</tr>
</tbody>
</table>

**NOTE:**
- When selected PICTURE MODE is different from your computer’s ICC color profile, you may experience inaccurate color reproduction.
- MultiProfiler software, developed by NEC Display Solutions, is highly recommended to provide extended color management features such as ICC profile Emulation and Printer Emulation. MultiProfiler software is included with the provided CD-ROM. Also, the latest MultiProfiler software is available on website.
- When PICTURE MODE is locked, “PICTURE MODE IS LOCKED” appears on screen. To unlock PICTURE MODE settings, press “SELECT” and “UP” buttons at the same time.

*1 P232W uses “DICOM SIM.”, a value near DICOM gamma.
Advanced OSD

If you need detailed information about the controls, please use the advanced menu. There are 2 ways to access the advanced menu.

**Way 1:**

*To access the advanced menu*

- Press the Menu button to access OSD menu. Use the front buttons to move the cursor to the ADVANCED SETTING in Color control systems. Press INPUT button to appear advanced menu.

*To exit the advanced menu*

- Press the EXIT button.

**Way 2:**

*To access the advanced menu*

- Turn off the monitor.
- Turn on the monitor by pushing the “POWER” and “INPUT/SELECT” button at the same time for at least one second simultaneously. Then press the control buttons (EXIT, LEFT, RIGHT, UP, DOWN).
- The Advanced menu will appear. This menu is larger than the normal OSD.

*To exit the advanced menu*

- Turn off and restart the monitor in the normal way.

To make an adjustment, ensure that the tag is highlighted, then press “SELECT”. To move to another tag, press “EXIT”, then press “LEFT” or “RIGHT” to highlight another tag.

<table>
<thead>
<tr>
<th>Tag</th>
<th>PICTURE MODE</th>
<th>Selects PICTURE MODE, one of 1 to 5.</th>
</tr>
</thead>
<tbody>
<tr>
<td>PRESET</td>
<td>Sets PICTURE MODE PRESET from the type of PRESET (see page 17).</td>
<td></td>
</tr>
<tr>
<td>BRIGHTNESS**</td>
<td>Adjusts the overall image and screen background brightness. Press “LEFT” or “RIGHT” to adjust.</td>
<td></td>
</tr>
<tr>
<td>WHITE</td>
<td>Adjusts the white color by temperature or xy setting. A lower color temperature will make the screen reddish and a higher color temperature will make the screen bluish. A stronger x makes the screen reddish, a stronger y makes it greenish and weak xy makes it a bluish white.</td>
<td></td>
</tr>
</tbody>
</table>

*2 This item does not reset by FACTORY PRESET (Tag7), when the AUTO BRIGHTNESS is set to “ON”.*
GAMMA Allows you to manually select the brightness level of grayscale. There are five selections: sRGB, L Star, DICOM*1, PROGRAMMABLE and CUSTOM. We recommend to show grayscale image data on screen.

sRGB: GAMMA setting for sRGB.
L Star: GAMMA setting for Lab color space.
DICOM*1: DICOM GSDF (Grayscale Standard Display Function) is typically used for medical imaging.
PROGRAMMABLE: The brightness of grayscale can be changed to your preference by downloading the application software. You can select this when PICTURE MODE is PROGRAMMABLE. This function could not select on Advanced OSD menu.
CUSTOM: CUSTOM VALUE can be adjusted when CUSTOM is selected as the GAMMA SELECTION setting.
CUSTOM VALUE: The gamma value is selected from the rate of 0.5 to 4.0 by 0.1 steps.

BLACK Adjusts the black luminance. When the selected settings are too low to be displayed, the indicator on the OSD will turn magenta.

RED GREEN BLUE Adjusts color gamut. When the selected settings are outside of the LCD gamut, the indicator on the OSD will turn magenta.

COLOR VISION EMU Previews various typical human vision deficiencies and is useful for evaluating how people who have such deficiencies will perceive colors. This preview is available in four modes: Types P (Protanopia), D (Deutanopia) and T (Tritanopia) emulate color vision dichromacy, and Grayscale can be used for evaluating contrast legibility.
NOTE: Depending on the vision of the user, including those with color vision deficiency, there will be a variation in how the screen's color is seen and experienced.
A simulation is used to illustrate the view of those with a color vision deficiency. It is not their actual view. The simulation is a reproduction of those with a strong color vision mode of type P, type D or type T. People with a slight color vision deficiency will experience little to no difference compared to those with normal color vision.

*1 P232W uses “DICOM SIM.”, a value near DICOM gamma.
**UNIFORMITY**
This function electronically compensates for the slight variations in the white uniformity level as well as for deviations in color that may occur throughout the display area of the screen. These variations are characteristic of LCD panel technology. This function improves the color and evens out the luminance uniformity of the display.

**NOTE:** Using the UNIFORMITY feature does reduce the overall peak luminance of the display. If greater luminance is desired over the uniform performance of the display, then UNIFORMITY should be turned off. A higher number produces a better effect, but may also reduce CONTRAST RATIO. When BRIGHTNESS is shown in magenta, the UNIFORMITY setting is automatically changed.

**Tag2**

**SHARPNESS**
This is a digital capability for keeping a crisp image at all signal timings. It continuously adjusts to maintain as distinct or as soft image as you prefer, and is set independently according to different timings. Press “LEFT” or “RIGHT” to adjust.

**RESPONSE IMPROVE**
Turns the Response Improve function on or off. Response Improve may reduce blurring that occurs in some moving images.

**ECO MODE**
Decreases the amount of power consumed by reducing the brightness level.

**MODE1**: Decreases the brightness range up to about 64.3%. (P232W)
Decreases the brightness range up to about 200 cd/m². (P241W)

**MODE2**: Decreases the brightness range up to about 28.6%. (P232W)
Decreases the brightness range up to about 100 cd/m². (P241W)

**AUTO BRIGHTNESS**
AUTO BRIGHTNESS has three settings. "OFF" is recommended for best color reproduction. 
ON: Adjusts the brightness automatically, by detecting the brightness level of your environment and adjusting the monitor with the best BRIGHTNESS setting. Please refer to Page 31 for full "Auto Brightness" information.

**METAMERISM**
Improves the white point color matching when the display used side-by-side with a standard gamut display monitor. This feature compensates for the way the human eye perceives colors slightly differently compared to the scientific instrument used to adjust the display during calibration.

**AMBIENT LIGHT COMP.**
Luminance setting depends on ambient light compensation. Mostly affects black reproduction.

**NOTE:** AUTO DIMMING SENSOR measures ambient brightness when power is on and affects image and color quality settings.

**NOTE:** Do not cover environmental brightness sensor (AUTO DIMMING SENSOR).

**(6 - AXIS ADJUST)**
HUE: Adjusts the hue of each color*1. The change in color will appear on screen and the menu color bars will show the amount of adjustment.
SATURATION: Adjusts the color depth of each color*1. Press the “RIGHT” button and the color vividness increases.
OFFSET: Adjusts the color brightness of each color*1. Press “RIGHT” button and the color Brightness increases.

*1: RED, YELLOW, GREEN, CYAN, BLUE and MAGENTA.

**SHORTCUT CUSTOM**
You can select the PICTURE MODE which are displayed in PICTURE MODE shortcut menu.

**Tag3**

**R-H.POSITION** (Analog input only)
Adjusts the position of the red component of the image. Press “LEFT” or “RIGHT” to adjust.

**G-H.POSITION** (Analog input only)
Adjusts the position of the green component of the image. Press “LEFT” or “RIGHT” to adjust.

**B-H.POSITION** (Analog input only)
Adjusts the position of the blue component of the image. Press “LEFT” or “RIGHT” to adjust.

**R-FINE** (Analog input only)
Adjusts the “FINE” setting of the RED component of the image. Press “LEFT” or “RIGHT” to adjust.

**G-FINE** (Analog input only)
Adjusts the “FINE” setting of the GREEN component of the image. Press “LEFT” or “RIGHT” to adjust.

**B-FINE** (Analog input only)
Adjusts the “FINE” setting of the BLUE component of the image. Press “LEFT” or “RIGHT” to adjust.

**R-SHARPNESS** (Analog input only)
Adjusts the sharpness of the red component of the image. Press “LEFT” or “RIGHT” to adjust.

**G-SHARPNESS** (Analog input only)
Adjusts the sharpness of the green component of the image. Press “LEFT” or “RIGHT” to adjust.

**B-SHARPNESS** (Analog input only)
Adjusts the sharpness of the blue component of the image. Press “LEFT” or “RIGHT” to adjust.
DVI LONG CABLE
(DVI input only)
Compensates for image degradation caused by using a long DVI cable. There are 4 possible settings, with “0” being the lowest level of compensation and “3” being the highest level. The default setting is “1”.

HDMI LONG CABLE*1
(HDMI input only)
Compensates for image degradation caused by using a long HDMI cable. There are 4 possible settings, with “0” being the lowest level of compensation and “3” being the highest level. The default setting is “1”.

AUTO ADJUST*2
(Analog input only)
Automatically adjusts the Image Position and H.SIZE settings and FINE settings. Press “SELECT” to activate Auto Adjustment. Please use test pattern, which is included in the enclosed CD-ROM.

SIGNAL ADJUST
(Analog input only)
Determines when the auto adjustment is activated automatically. The choices are “SIMPLE” and “FULL”. Press “LEFT” or “RIGHT” to select.

AUTO ADJUST LEVEL
(Analog input only)
Determines the automatic adjustment level for AUTO ADJUST. The choices are “SIMPLE”, “FULL”, and “DETAIL”. Press “LEFT” or “RIGHT” to select. Refer to the below table.

A-NTAA SW
(Analog input only)
The Advanced No Touch Auto Adjust function is able to recognize new signals even when neither the resolution nor the refresh rate has changed. If several PCs are connected to the monitor, and each transmit very similar (or even the same) signals in terms of resolution and refresh rates, the monitor recognizes that there is a new signal and automatically optimizes the picture without the need for any action on the part of the user.
OFF: A-NTAA is disabled.
ON: If a change in signal is detected A-NTAA will adjust the monitor to the optimal settings for the new signal. If no change in the signal is detected then A-NTAA does not activate. The screen will be blank while the monitor optimizes the signal.
OPTION: Functions the same as ON, except that the screen does not go blank when the monitor makes adjustments for changes in signal, allowing the monitor to display the new signal faster. When using an external switching device to connect 2 or more PCs to the monitor, using the ON or OPTION settings is suitable.

AUTO CONTRAST*2
(Analog input only)
Adjusts the image displayed for non-standard video inputs. Press “SELECT” to adjust. Any adjustment requires the image to have white portions.

CONTRAST
(Analog input only)
Adjusts the image brightness and contrast in relation to the background. Press “LEFT” or “RIGHT” to adjust.

AUTO BLACK LEVEL*2
(Analog input only)
Automatically adjusts the black level. Any adjustment requires the image to have black portions. Press “SELECT” to activate AUTO ADJUST.

BLACK LEVEL
(Analog input only)
Adjusts the RGB black level by input signal level.

VIDEO LEVEL*1
(HDMI input only)
NORMAL: For computer setting. Displays all input signals of 0-255 steps.
EXPAND: For audio-visual equipment setting. Expands input signals of 16-235 steps to 0-255 steps.
AUTO: Auto setting depending on the input signal.

H.POSITION
Controls Horizontal Image Position within the display area of the LCD. Press “LEFT” or “RIGHT” to adjust.

V.POSITION
Controls Vertical Image Position within the display area of the LCD. Press “LEFT” or “RIGHT” to adjust.

H.SIZE
(Analog input only)
Adjusts the horizontal size of the screen. If the “AUTO ADJUST” function do not give you a satisfactory picture setting, a further tuning can be performed using the “H.SIZE (V.SIZE)” function (dot clock). For this a Moiré test pattern could be used. This function may alter the width of the picture. Use LEFT/RIGHT Menu to center the image on the screen. If the H.SIZE (V.SIZE) is incorrectly calibrated, vertical bands will appear. The image should be homogeneous.

*1 Only for P232W
*2 This item does not reset by FACTORY PRESET (Tag7).
<table>
<thead>
<tr>
<th><strong>FUNCTION</strong></th>
<th><strong>DESCRIPTION</strong></th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>FINE</strong></td>
<td>Improve focus, clarity and image stability by increasing or decreasing this setting. If the “AUTO ADJUST” function and the “H.SIZE” function do not give you a satisfactory picture setting, a fine tuning can be performed using the “FINE” function. For this a Moiré test pattern could be used. If the Fine value is incorrectly calibrated, horizontal lines will appear on the display. The image should be homogeneous.</td>
</tr>
<tr>
<td><strong>AUTO FINE</strong></td>
<td>This function automatically and periodically adjusts the “FINE” setting for change in signal condition. This function adjusts approximately every 33 minutes.</td>
</tr>
<tr>
<td><strong>H.RESOLUTION</strong></td>
<td>Adjusts the horizontal size by increasing or decreasing the setting. Press “RIGHT” button to expand the width of the image on the screen. Press “LEFT” button to narrow the width of the image on the screen.</td>
</tr>
<tr>
<td><strong>V.RESOLUTION</strong></td>
<td>Adjusts the vertical size by increasing or decreasing the setting. Press “RIGHT” button to expand the height of the image on the screen. Press “LEFT” button to narrow the height of the image on the screen.</td>
</tr>
<tr>
<td><strong>EXPANSION</strong></td>
<td>Sets the zoom method. FULL: The image is expanded to full screen, regardless of the resolution. ASPECT: The image is expanded without changing the aspect ratio. OFF: The image is not expanded. CUSTOM: When CUSTOM is selected as the Expansion mode, it becomes possible to adjust the H. ZOOM., V. ZOOM, and ZOOM POS.</td>
</tr>
<tr>
<td><strong>OVER SCAN</strong></td>
<td>Some video formats may require different scanning modes in order to best display the image. ON: Image size is larger than what can be displayed. The image edge will appear cropped. Approximately 95% of the image will be shown on the screen. OFF: Image size stays within the display area. The whole image is displayed on the screen. AUTO: Auto setting.</td>
</tr>
<tr>
<td><strong>SIDE BORDER COLOR</strong></td>
<td>Adjusts the side black bars color between black and white.</td>
</tr>
<tr>
<td><strong>USB SELECTION</strong></td>
<td>USB UP Stream Port Selection for DP/HDMI/DVI-D//D-SUB (P232W), DP/DVI-1/DVI-2/D-SUB (P241W). When connecting a computer to each of the upstream ports, the monitor’s USB downstream ports can be used by selecting this setting for the current input signal. When using only one upstream port, the connected upstream port is active. You can change the active display and upstream USB port combination by using the Input button (see page 11). NOTE: To avoid data loss, before changing USB upstream ports, ensure that no USB storage devices are in use by the operating system of the computer attached to the USB upstream port.</td>
</tr>
<tr>
<td><strong>EDID EXTENSION</strong></td>
<td>A communication setting with input device, containing signal timing. NORMAL: When a PC or other computer equipment is connected, select “NORMAL”. Enhanced: Alternate setting for non-PC devices such as DVD players or game consoles. Note: Interlaced signals (480i, 576i, 1080i) are not supported. If you have any problems, please refer to the Troubleshooting section of this User’s Manual. When EDID EXTENSION has been changed, the connected equipment has to be restarted.</td>
</tr>
<tr>
<td><strong>VIDEO DETECT</strong></td>
<td>Selects the method of video detection when more than one computer is connected. Press “LEFT” or “RIGHT” to select. FIRST: When current video input signal is not present, then the monitor searches for a video signal from the other video input port. When current video input signal is not present, then the monitor searches for a video signal from the other video input port. If the video signal is present in the other port, then the monitor switches the video source input port to the new found video source automatically. NONE: The Monitor will not search the other video input port unless the monitor is turned on.</td>
</tr>
</tbody>
</table>

*1 Only for P232W.
*2 This item does not reset by FACTORY PRESET (Tag7).
| **OFF TIMER** | Monitor will automatically turn off after the preset time period from power on with the ON/OFF function. When you select “ON”, press “SELECT” and “LEFT” or “RIGHT” to adjust. Before powering off, a message will appear on the screen asking the user if they want to delay the turn off time by 60 minutes. Press any OSD button to delay the turn off time. |
| **OFF MODE** | The Intelligent Power Manager allows the monitor to enter into a power saving mode after a period of inactivity. The OFF MODE has three settings. OFF: Monitor does not go into power save mode when the input signal is lost. STANDARD: Monitor enters power save mode automatically when the input signal is lost. OPTION: Monitor enters power save mode automatically when the amount of surrounding light goes below the level that is determined by the user. |
| **OFF MODE SETTING** | Adjusts the ILLUMINANCE value for OFF MODE. Shows illuminance. |
| **LED BRIGHTNESS**<sup>2</sup> | Controls the brightness of the power LED on the monitor. |
| **LED COLOR**<sup>2</sup> | Toggles the power LED on the front between blue or green. |
| **Tag7** | **LANGUAGE**<sup>2</sup> | OSD control menus are available in nine languages. Press “LEFT” or “RIGHT” to select. |
| **OSD H.POSITION** | You can choose where you would like the OSD control image to appear on your screen. Selecting OSD Location allows you to manually adjust the position of the OSD control menu left or right. |
| **OSD V.POSITION** | You can choose where you would like the OSD control image to appear on your screen. Selecting OSD Location allows you to manually adjust the position of the OSD control menu up or down. |
| **OSD TURN OFF** | The OSD control menu will stay on as long as it is use. You can select how long the monitor waits after the last touch of a button to shut off the OSD control menu. The preset choices are 10-120 seconds in 5 second increments. |
| **OSD LOCK OUT**<sup>2</sup> | This control completely locks out access to all OSD control functions. When attempting to activate OSD controls while in the Lock Out mode, a screen will appear indicating the OSD controls are locked out. There are three types of OSD LOCK OUT: OSD LOCK OUT with no control: To activate the OSD Lock Out function, press SELECT, then “RIGHT” button and hold down simultaneously. To deactivate the OSD Lock Out, press SELECT, then “RIGHT” button and hold down simultaneously while in the OSD menu. No controls can be adjusted while in the lock out mode. OSD LOCK OUT with BRIGHTNESS (only) control: To activate the OSD Lock Out function, press SELECT, then “DOWN” and “LEFT” buttons and hold down simultaneously. To deactivate the OSD Lock Out, press SELECT, then “DOWN” and “LEFT” buttons and hold down simultaneously while in the OSD menu. BRIGHTNESS can be adjusted while in the lock out mode. CUSTOM: Press RESET and EXIT to enter the CUSTOM Menu. Select ENABLE or DISABLE for POWER KEY, INPUT SEL, HOT KEY (BRIGHTNESS), PICTURE MODE, WARNING (RESOLUTION NOTIFIER/OSD LOCK OUT). To Deactivate the OSD Lock Out function, press RESET and EXIT to bring up the LOCK OUT warning. Press SELECT, SELECT, <, >, <, >, EXIT. |
| **OSD TRANSPARENCY** | Adjusts the transparency of the OSD MENU. |
| **OSD COLOR**<sup>2</sup> | “Tag window frame color”, “Item select color” & “Adjust Window frame color” can be changed. |
| **BOOT LOGO**<sup>2</sup> | The NEC logo is briefly displayed after the monitor is powered on. This feature can be turned on or off in the OSD. Note: If the “EXIT” button is kept pressed while NEC logo is displayed, the BOOT LOGO menu will appear. It is possible to change the BOOT LOGO setting to OFF. |
| **SIGNAL INFORMATION**<sup>2</sup> | Signal information can be displayed in the corner of the screen. Signal information is either “ON/OFF”. |
| **RESOLUTION NOTIFIER**<sup>2</sup> | The optimal resolution is 1920 x 1200. If ON is selected, a message will appear on the screen after 30 seconds, notifying you that the resolution is not set to 1920 x 1200. Press “LEFT” or “RIGHT” to select. |
| **HOT KEY**<sup>2</sup> | When this function is activated; the brightness of the monitor can be adjusted without entering the OSD menu by using the front buttons. The “LEFT” or “RIGHT” buttons adjust the brightness level. When this function is set to OFF, some buttons are disabled. See page 11. |

<sup>2</sup>This item does not reset by FACTORY PRESET (Tag7).
### FACTORY PRESET*2
Selecting FACTORY PRESET allows you to reset all OSD control settings back to the factory settings. Highlighting the control to be reset and pressing the RESET button can reset individual settings.

### OSD ROTATION

- **AUTO**: The OSD rotates automatically when the monitor is rotated. OSD ROTATION is set to AUTO by default.
- **LANDSCAPE**: Display the OSD with landscape mode.
- **PORTRAIT**: Display the OSD with portrait mode.

### IMAGE ROTATION

- **AUTO**: The main window image automatically rotates according to the orientation of the display. If “AUTO” is selected in the “OSD ROTATION” menu, the main window image rotates according to the orientation of the monitor.
- **OFF**: The main window image is not rotated. IMAGE ROTATION is set to OFF by default.
- **ON**: The main window image always rotated.

### SUB IMAGE ROTATION

- **AUTO**: The sub window image automatically rotates according to the orientation of the display. If “AUTO” is selected in the “OSD ROTATION” menu, the sub window image rotates according to the orientation of the monitor.
- **OFF**: The sub window image is not rotated. IMAGE ROTATION is set to OFF by default.
- **ON**: The sub window image always rotated.

### DDC/CI

- **DDC/CI ENABLE/DISABLE**: Turns on or off the two way communication and control with connected PC by video cable.
- **NOTE**: Set DDC/CI to ENABLE when using hardware calibration software like MultiProfiler over DisplayPort, DVI or VGA.

### SCREEN SAVER

- **MOTION** (Default OFF): Screen image moves periodically in 4 directions in order to reduce the risk of image retention.
  - Timing for MOTION can be set so the screen image moves in intervals from every 10 to 900 seconds. Timing is set in 10-second increments.
  - OPTION (Default REDUCED): There are two optional selections.
    - REDUCED: Screen image is reduced to 95% size and is moved periodically in 4 directions. Screen may appear slightly less sharp than normal. The full image appears on the display.
    - FULL: Screen image is set to FULL and is moved periodically in 4 directions. Screen image goes outside of the display area in the direction that it shifts so that a portion of the image may appear to be cut off.
  - **NOTE**: SCREEN SAVER works when ENABLE is OFF in TILE MATRIX and PIP MODE is OFF.

### INPUT SETTING*2

- **Video Band Width**: Reduce the visual “noise” level of the input signal. It is strong ineffective, so that a number becomes small. Press “LEFT” or “RIGHT” to select.
- **Sync Threshold**: Adjusts the slice level of a synchronization signal. Press “SELECT” to move the adjustment menu. Adjusts the sensitivity of the separate or composite input signals.
- **SOG Threshold**: Adjusts the sensitivity of the Sync On Green input signals. Adjusts the slice level when separating synchronization from sync On Green signal input. Press “LEFT” or “RIGHT” to select.
- **Clamp position**: Operating your monitor at a non-standard timing may cause images to appear darker than normal or have color distortion. Use of the Clamp position control will adjust images to their normal state.

*2 This item does not reset by FACTORY PRESET (Tag7).
TagA TILE MATRIX

The TILE MATRIX feature allows one image to be displayed over multiple screens. This feature can be used with up to 25 monitors (5 vertical and 5 horizontal). Using TILE MATRIX requires the PC output signal be sent through a distribution amplifier to each individual monitor.

H MONITOR: Select the number of horizontal displays.
V MONITOR: Select the number of vertical displays.
MONITOR No: Select a position to expand the screen.
TILE COMP: Works in tandem with TILE MATRIX to compensate for the width of the tile bezels in order to accurately display the image.
Tile Comp with 4 monitors (black area shows monitor frames):

NOTE: TILE MATRIX works only when PIP MODE is OFF.

TagB CARBON SAVINGS

Displays the estimated carbon savings information in kg.

CARBON USAGE

Displays the estimated carbon usages information in kg. This is the arithmetic estimation, not actual measurement value. This estimation is based without any options.

COST SAVINGS

Displays the electricity cost savings in balance.

CARBON CONVERT SETTING

Adjusts the carbon footprint factor in the carbon saving calculation. This initial setting is based on the OECD (2008 Edition).

CURRENCY SETTING*1

Displays electricity pricing (available in 6 currency units).

CURRENCY CONVERT SETTING

Adjusts electricity prices-electric energy equivalent in the electrical rate saving calculation.

HOURS RUNNING*1

Show total running time.

SELF COLOR CORRECTION*2

Compensates for typical a LCD yellowish color shift due to long-term usage by internal color sensor. This takes approximately 30 to 60 minutes depending on warm up time to complete.

TagC INFORMATION*1

Provides information about the current display resolution. Technical data, including the preset timing currently being used and the horizontal and vertical frequencies is also displayed.

*1 This item does not reset by FACTORY PRESET (Tag7).
*2 Only for P241W.

*1 Interpolated Resolutions: When resolutions are shown that are lower than the pixel count of the LCD module, text may appear different. This is normal and necessary for all current flat panel technologies when displaying non-native resolutions full screen. In flat panel technologies, each dot on the screen is actually one pixel, so to expand resolutions to full screen, an interpolation of the resolution must be done.

*2 1080 x 1920 resolution only.

**NOTE:** Technical specifications are subject to change without notice.

*¹ Interpolated Resolutions: When resolutions are shown that are lower than the pixel count of the LCD module, text may appear different. This is normal and necessary for all current flat panel technologies when displaying non-native resolutions full screen. In flat panel technologies, each dot on the screen is actually one pixel, so to expand resolutions to full screen, an interpolation of the resolution must be done.

*² 1200 x 1920 resolution only.

**NOTE:** Technical specifications are subject to change without notice.
**Features**

**DisplayPort:** DisplayPort is designed to be the future-ready, scalable solution for high performance digital display connectivity. It enables the highest resolutions, the fastest refresh rates and deepest color depths over standard cables.

**HDMI:** HDMI is designed to be the future-ready, scalable solution for high performance digital display connectivity. It enables the highest resolutions, the fastest refresh rates and deepest color depths over standard cables, especially for consumer audio/video equipment.

**DFP (Digital Flat Panel):** An all-digital interface for flat panel monitors which is signal compatible with DVI. As a DVI-based digital only connection, only a simple adapter is necessary for compatibility between DFP and other DVI-based digital connectors such as DVI and P&D.

**P&D (Plug and Display):** The VESA standard for digital flat panel monitor interfaces. It is more robust than DFP since it allows for other options off a signal connector (options like USB, analog video and IEEE-1394-995). The VESA committee has recognized that DFP is a subset of P&D. As a DVI-based connector (for the digital input pins), only a simple adapter is necessary for compatibility between P&D and other DVI-based digital connector such as DVI and DFP.

**Pivoting Stand:** Allows users to adjust the monitor to the orientation that best fits their application, either Landscape orientation for wide documents, or Portrait orientation for the ability to preview a full page on one screen at one time. The Portrait orientation is also perfect for full screen video conferencing.

**Reduced Footprint:** Provides the ideal solution for environments with space constraints that still require superior image quality. The monitor’s small footprint and low weight allow it to be moved or transported easily from one location to another.

**Color Control Systems:** Allow you to adjust the colors on your screen and customize the color accuracy of your monitor to a variety of standards.

**Natural Color Matrix:** Combines Six-axis color control and the sRGB standard. Six-axis color control permits color adjustments via six axes (R, G, B, C, M and Y) rather than through the three axes (R, G and B) previously available. The sRGB standard provides the monitor with a uniform color profile. This assures that the colors displayed on the monitor are exactly the same as on the color printout (with sRGB supporting operating system and sRGB printer). This allows you to adjust the colors on your screen and customise the color accuracy of your monitor to a variety of standards.

**OSD (On-Screen Display) Controls:** Allow you to quickly and easily adjust all elements of your screen image via simple to use on-screen menus.

**ErgoDesign Features:** Enhanced human ergonomics to improve the working environment, protect the health of the user and save money. Examples include OSD controls for quick and easy image adjustments, tilt base for preferred angle of vision, small footprint and compliance with MPRII and TCO guidelines for lower emissions.

**Plug and Play:** The Microsoft® solution with the Windows® operating system facilitates setup and installation by allowing the monitor to send its capabilities (such as screen size and resolutions supported) directly to your computer, automatically optimizing display performance.

**Intelligent Power Manager System:** Provides innovative power-saving methods that allow the monitor to shift to a lower power consumption level when on but not in use, saving two-thirds of your monitor energy costs, reducing emissions and lowering the air conditioning costs of the workplace.

**Multiple Frequency Technology:** Automatically adjusts monitor to the display card’s scanning frequency, thus displaying the resolution required.

**FullScan Capability:** Allows you to use the entire screen area in most resolutions, significantly expanding image size.

**Wide Viewing Angle Technology:** Allows you to be able to see the monitor from any angle (178°) from any orientation — Portrait or Landscape. Provides full 178° viewing angles either up, down, left or right.

**VESA Standard Mounting Interface:** Allows users to connect your MultiSync monitor to any VESA standard third party mounting arm or bracket.

**Visual Controller:** Is a ground-breaking software family, developed by NEC Display Solutions, providing intuitive access to all monitor setting controls and remote diagnosis via the Windows interface, based upon the VESA standard, DDC/CI. Using a standard VGA or DVI signal cable, Visual Controller can either benefit single users or, with Visual Controller Administrator, can reduce the Total Cost of Ownership through remote network-wide maintenance, diagnosis and asset-reporting.

**No Touch Auto Adjust (Analog input only):** Automatically adjusts the monitor to optimal settings upon initial setup.

**sRGB Color Control:** A new optimized color management standard which allows for color matching on computer displays and other peripherals. The sRGB, which is based on the calibrated color space, allows for optimal color representation and backward compatibility with other common color standards.

**UNIFORMITY:** This feature compensates for slight variations in the white uniformity level that may occur on the screen and improves the color and evens out the luminance uniformity of the display.

**Response Improve:** Improved gray to gray response.

**Adjustable stand with pivot capability:** Adds flexibility to your viewing preferences.

**Quick Release stand:** Allows fast removal.

**Auto dimming technology:** Automatically adjusts the backlight level depending on the level of ambient lighting.

**USB 2.0 hub** adds excitement to your computing by connecting you to digital cameras, scanners and more.
Troubleshooting

No picture
- The signal cable should be completely connected to the display card/computer.
- The display card should be completely seated in its slot.
- The monitor does not support DisplayPort converter signal.
- Front Power Switch and computer power switch should be in the ON position.
- Check to make sure that a supported mode has been selected on the display card or system being used.
  (Please consult display card or system manual to change graphics mode.)
- Check the monitor and your display card with respect to compatibility and recommended settings.
- Check the signal cable connector for bent or pushed-in pins.
- Check the signal input, "DVI-D", “DisplayPort”, “HDMI”*1 or “D-Sub”.
- If the front LED is blinking amber, check the status of the OFF MODE mode (see page 15).
- When using a DVD player or any other type of high-definition device, please do not use interlaced signals. If the monitor detects an interlaced signal, an OSD warning will appear. If this OSD warning appears, please do the following: press the RESET and EXIT buttons simultaneously, to temporarily show the image coming from the high-definition device. While the image is visible, change the signal of the device from interlaced to progressive (non-interlaced). Consult the User’s Manual included with the device for detailed information on changing the signal from interlaced to progressive.

Power Button does not respond
- Unplug the power cord of the monitor from the AC outlet to turn off and reset the monitor.

Image Persistence
- Image persistence is when a residual or “ghost” image of a previous image remains visible on the screen. Unlike CRT monitors, LCD monitors’ image persistence is not permanent, but constant images being displayed for a long period of time should be avoided. To alleviate image persistence, turn off the monitor for as long as the previous image was displayed. For example, if an image was on the monitor for one hour and a residual image remains, the monitor should be turned off for one hour to erase the image.

NOTE: As with all personal display devices, NEC DISPLAY SOLUTIONS recommends using a moving screen saver at regular intervals whenever the screen is idle or turning off the monitor when not in use.

Picture is discolored
- Make sure COLOR VISION EMU is OFF.
- Make sure PICTURE MODE setting is same as ICC profile on PC.
- Set SELF COLOR CORRECTION.
- When using an analog input, display the test pattern included in the enclosed CD-ROM and set AUTO ADJUST.
- First, use the front POWER button to turn off the monitor. Then use the POWER button turn the monitor on while holding RESET (PIP) and SELECT (INPUT) buttons at the same time. This will reset all color parameters to the factory setting. This reset will take about 10 seconds and then the factory settings screen is displayed.

Color irregularities on screen
- Reduce BRIGHTNESS.
- Set UNIFORMITY to “5”.

Image is flickering
- When using an analog input, display the test pattern included in the enclosed CD-ROM and set AUTO ADJUST.

Message “OUT OF RANGE” is displayed (screen is either blank or shows rough images only)
- Image is displayed only roughly (pixels are missing) and OSD warning “OUT OF RANGE” is displayed: Either signal clock or resolution is too high. Choose one of the supported modes.
- OSD warning “OUT OF RANGE” is displayed on a blank screen: Signal frequency is out of range. Choose one of the supported modes.

Image is unstable, unfocused or swimming is apparent
- Signal cable should be completely attached to the computer.
- Use the OSD Image Adjust controls to focus and adjust display by increasing or decreasing the fine adjustment. When the display mode is changed, the OSD Image Adjust settings may need to be readjusted.
- Check the monitor and your display card with respect to compatibility and recommended signal timings.
- If your text is garbled, change the video mode to non-interlace and use 60Hz refresh rate.

LED on monitor is not lit (no green, blue or amber color can be seen)
- Power Switch should be in the ON position and power cord should be connected.

*1 Only for P232W
**Picture is not as bright**
- Make sure ECO MODE and AUTO BRIGHTNESS are turned off.
- If the brightness fluctuates make sure AUTO BRIGHTNESS is turned off.
- In PICTURE MODE, set HI-BRIGHT. See page 17.
- LCD brightness degradation occurs due to long-term usage or extreme cold conditions.
- When the display cannot achieve the desired brightness, the numerical brightness value on the OSD will blink.
- When using an HDMI input, please change “VIDEO LEVEL”*1.

**Display image is not sized properly**
- Use the OSD Image Adjust controls to increase or decrease the Coarse adjustment.
- Check to make sure that a supported mode has been selected on the display card or system being used. (Please consult display card or system manual to change graphics mode.)
- When using an HDMI input, please change “OVER SCAN”*1.

**No Video**
- If no video is present on the screen, turn the Power button off and on again.
- Make certain the computer is not in a power-saving mode (touch the keyboard or mouse).
- Some video cards do not output video signal when monitor is turned OFF/ON or disconnect/connect from the AC power cord under low resolution with DisplayPort.
- If no video is present on the screen, check the status of the EDID EXTENSION in the User menu (see page 14), the setting may need to be changed to allow HDCP content to be displayed.

**Brightness variations over time**
- Change AUTO BRIGHTNESS to OFF and adjust brightness.

**NOTE:** When AUTO BRIGHTNESS is set to ON, the monitor automatically adjusts brightness based on the environment. When the brightness of surrounding environment changes, the monitor will also change.

**Self Diagnosis**
- The LCD display is equipped with the ability to self diagnose abnormalities. When the LCD detects a problem, the LED on the front flashes in a pattern of long and short blinks, depending on the type of problem detected.
- If the LED signals a problem, please refer service to qualified personnel.

**USB Hub does not operate**
- Check to make sure the USB cord is properly connected. Refer to your USB devise User’s Manual.
- Make sure correct upstream is selected on USB hub setting (see page 14).
- Disconnect one upstream USB cable when using 2 upstream.

*1 Only for P232W
Using the Auto Brightness function

The brightness of the LCD screen can be set to increase or decrease depending on the amount of ambient light within the room. If the room is bright, the monitor becomes correspondingly bright. If the room is dim, then the monitor will dim accordingly. The purpose of this function is to make the viewing experience more comfortable to the eye in a variety of lighting conditions.

The Auto Brightness function is set to OFF by default.

**SETUP**

Use the following procedures to select the Brightness Range that the monitor will use when the Auto Brightness function is activated.

1. Set the BRIGHTNESS level. This is the brightness level that the monitor will go up to when the ambient light level is highest. Select this setting when the room is at its brightest.
   
   Select “ON” in the AUTO BRIGHTNESS menu (Figure 1). Then use the front buttons to move the cursor up to the BRIGHTNESS setting. Choose the desired brightness level (Figure 2).

2. Set the DARK level. This is the level of brightness that the monitor will go down to when the ambient light level is low. Make sure the room is at its darkest when setting this level.
   
   Then use the front buttons to move the cursor up to the BRIGHTNESS setting. Choose the desired brightness level (Figure 3).

![Figure 1](image1.png)

![Figure 2](image2.png)

![Figure 3](image3.png)

When the “AUTO BRIGHTNESS” function is enabled the Brightness level of the screen changes automatically according to the lighting conditions of the room (Figure 4).

![Figure 4](image4.png)

Lb: Border between bright and dim lighting conditions; set at factory
L1: BRIGHTNESS level set for the monitor to use when ambient lighting level is high (L1>Lb)
L2: BRIGHTNESS level set for the monitor to use when ambient lighting level is low (L2<Lb)

L1 and L2 are the brightness levels set by the user to compensate for changes in ambient lighting.
Congratulations!

The display you have just purchased carries the TCO’03 Displays label. This means that your display is designed, manufactured and tested according to some of the strictest quality and environmental requirements in the world. This makes for a high performance product, designed with the user in focus that also minimizes the impact on our natural environment.

Some of the features of the TCO’03 Display requirements:

**Ergonomics**
- Good visual ergonomics and image quality in order to improve the working environment for the user and to reduce sight and strain problems. Important parameters are luminance, contrast, resolution, reflectance, color rendition and image stability.

**Energy**
- Energy-saving mode after a certain time – beneficial both for the user and the environment
- Electrical safety

**Emissions**
- Electromagnetic fields
- Noise emissions

**Ecology**
- The product must be prepared for recycling and the manufacturer must have a certified environmental management system such as EMAS or ISO 14 001
- Restrictions on:
  - chlorinated and brominated flame retardants and polymers
  - heavy metals such as cadmium, mercury and lead.

The requirements included in this label have been developed by TCO Development in co-operation with scientists, experts, users as well as manufacturers all over the world. Since the end of the 1980s TCO has been involved in influencing the development of IT equipment in a more user-friendly direction. Our labelling system started with displays in 1992 and is now requested by users and IT-manufacturers all over the world.

Congratulations!

This display is designed for both you and the planet!

The display you have just purchased carries the TCO Certified label. This ensures that your display is designed, manufactured and tested according to some of the strictest quality and environmental requirements in the world. This makes for a high performance product, designed with the user in focus that also minimizes the impact on the climate and our natural environment.

TCO Certified is a third party verified program, where every product model is tested by an accredited impartial test laboratory. TCO Certified represents one of the toughest certifications for displays worldwide.

Some of the Usability features of the TCO Certified for displays:

• Good visual ergonomics and image quality is tested to ensure top performance and reduce sight and strain problems. Important parameters are luminance, contrast, resolution, black level, gamma curve, color and luminance uniformity, color rendition and image stability.
• Product have been tested according to rigorous safety standards at an impartial laboratory.
• Electric and magnetic fields emissions as low as normal household background levels.
• Low acoustic noise emissions.

Some of the Environmental features of the TCO Certified for displays:

• The brand owner demonstrates corporate social responsibility and has a certified environmental management system (EMAS or ISO 14001).
• Very low energy consumption both in on- and standby mode minimize climate impact.
• Restrictions on chlorinated and brominated flame retardants, plasticizers, plastics and heavy metals such as cadmium, mercury and lead (RoHS compliance).
• Both product and product packaging is prepared for recycling.
• The brand owner offers take-back options.

The requirements can be downloaded from our web site. The requirements included in this label have been developed by TCO Development in co-operation with scientists, experts, users as well as manufacturers all over the world. Since the end of the 1980s TCO has been involved in influencing the development of IT equipment in a more user-friendly direction. Our labeling system started with displays in 1992 and is now requested by users and IT-manufacturers all over the world. About 50% of all displays worldwide are TCO certified.

NEC DISPLAY SOLUTIONS is strongly committed to environmental protection and sees recycling as one of the company's top priorities in trying to minimize the burden placed on the environment. We are engaged in developing environmentally-friendly products, and always strive to help define and comply with the latest independent standards from agencies such as ISO (International Organisation for Standardization) and TCO (Swedish Trades Union).

Disposing of your old NEC product
The aim of recycling is to gain an environmental benefit by means of re-use, upgrading, reconditioning or reclamation of material. Dedicated recycling sites ensure that environmentally harmful components are properly handled and securely disposed. To ensure the best recycling of our products, NEC DISPLAY SOLUTIONS offers a variety of recycling procedures and gives advice on how to handle the product in an environmentally sensitive way, once it has reached the end of its life.

All required information concerning the disposal of the product and country-specific information on recycling facilities can be found on our following websites:

http://www.nec-display-solutions.com/greencompany/ (in Europe),
http://www.nec-display.com (in Japan) or
http://www.necdisplay.com (in USA).

Energy Saving
This monitor features an advanced energy saving capability. When a VESA Display Power Management Signalling (DPMS) Standard signal is sent to the monitor, the Energy Saving mode is activated. The monitor enters a single Energy Saving mode.

WEEE Mark (European Directive 2002/96/EC)

Within the European Union
EU-wide legislation, as implemented in each Member State, requires that waste electrical and electronic products carrying the mark (left) must be disposed of separately from normal household waste. This includes monitors and electrical accessories, such as signal cables or power cords. When you need to dispose of your NEC display products, please follow the guidance of your local authority, or ask the shop where you purchased the product, or if applicable, follow any agreements made between yourself and NEC.

The mark on electrical and electronic products only applies to the current European Union Member States.

Outside the European Union
If you wish to dispose of used electrical and electronic products outside the European Union, please contact your local authority so as to comply with the correct disposal method.
